

II. SEISMIC REFLECTION SURVEY OF LEG 29 DRILL SITES

Robert E. Houtz and T.D. Aitken, Lamont-Doherty Geological Observatory of Columbia University, Palisades, New York

In the navigational plots shown in Figures 1-7, the ships' tracks in the area of each drill site are annotated with time marks that can be related to the times shown on the seismic profiler sections. The navigational plots appear in sequence, and each plot is followed by the profiler sections that appear in that particular plot. Sonobuoy station numbers are preceded by the letter R in the profiler photographs.

Sites 275, 276, and 278 were not surveyed as drill sites by *Eltanin* because sufficient profiler data were already available from previous *Eltanin* sections. Sites 277, 282, and 284 were chosen as entirely new sites during Leg 29, but except for Site 277 (not shown), enough data were already available to obviate additional surveys.

The rest of the sites were surveyed in detail by *Eltanin*. The sonobuoy data from these surveys appear separately (Houtz, 1975). Note that the navigational control of *Eltanin* Cruise 27 and *Conrad* 9 is inferior to that of the other cruises. All the records were made with an airgun

sound-source except on *Eltanin* 39, when a compressor breakdown necessitated the use of a 10-kj sparker.

ACKNOWLEDGMENTS

With the exception of a *Conrad*-9 profiler section near Site 284, all the seismic data were obtained aboard *Eltanin*. These cruises were supported by the Office of Polar Programs, National Science Foundation. The detailed surveys at Sites 279, 280, 281, and 283 were carried out under the direction of T. Aitken as Chief Scientist aboard *Eltanin*. Partial support for the data reduction was provided by National Science Foundation Grant GA 28338.
