INDEX

Absorption chromatography, bitumoids, 683
Acritarchs, 993
Aegean Sea, present-day salinity values, 643
Afig Formation, 1208
Age determinations based on pollen, 515
  radiocarbon values, 627
  varves, 483
Algerian continental margin, 1181
Algerian shelf, tectonic activity, 1181
Alkaline metal content, Black Sea sediments, 597
Alkanes, 697
Alloisoleucine-isoleucine ratios, dependence on depositional environment, 700
Alpha cold period, 30, 41, 147, 299, 997
Alpha glacial stage, 133, 513, 516
Aluminosilicates, Hole 379A, 531
Amino acid abundances, effect of depth on, 699
  Effects of reducing and oxidizing environment on, 699
  Hole 379A, 699, 704, 727
  Hole 380A, 699
  Site 381, 699, 727
  temporal variations in, 699
Amino acids, 725, 1176
Amino acids in Black Sea sediment samples, 698
Amorphous silica, geochemistry of, 585
Analytic techniques, major elements, 527
  minor elements, 527
Analytical procedures, organic geochemistry of sediments, 755
  strontium concentrations in sediments, 608
Anatolian Fault, 1046
Andesite tuffs dredged on submarine Arkhangelsky Ridge, 469
Andesitic tuffs dredged in the Sinopian area, 471
Apulian-Agean-Anatolian blocks, 1077
Arab-African plate, 1077
Arabian Platform, paleogeographic reconstruction, second erosional phase, 1204
  transgression of the Ziglag Reef over, 1208
Arabian Platform, 1199, 1214
  Emergence of, 1201, 1217
Aragonite, 382, 385, 452, 462
  genesis features, 583
  inorganically precipitated, 34
Aragonite precipitation, 512, 618
Aral Lake, 1017
Aral Sea, 487
Ardana-Kalogrea Formation, 1186
Arkhangelsky Ridge, dredging results from, 469
Asphaltenes, 727
Athalassa formation, 1186
Atlas Mountains, 1181
Atomic-absorption spectroscopy studies, 375
Authigenic mineralogical forms of iron (total), 723, 726
Authorship, responsibility for, 6
Azov, Sea of, Caspibraackish ostracodes from, 1039
Background and objectives, Site 379, 30
  Site 380, 120
  Site 381, 294
Bacteria, sulfate-reducing, 767
Bacterial activity, carbon dioxide reduction, 673
  controlled by methane production, 649
Bacterial densities in Black Sea sediments, 769
Bacterial sulfate reduction, depositional environment of, 625
Balearic Basin, 1100
Barite, 423
Bathymetry, Black Sea, 360, 1043
Belaya River, 413
Benthic foraminifers from sediments of western shelf, Black Sea, 783
Benthic foraminifers, as salinity indicators, 493
  Hole 380, 146
  Site 381, 298
Benthic ostracodes from Lake Erie, 1039
Benthic ostracodes from Great Lakes, 1039
Benzene, 673
Bering Sea sediments, 744
Bet Guvrin formation, 1197
  description of, 1201
Bet Guvrin sedimentary cycle, 1199
Bet Nir conglomerate, 1208
Beta cold period, 30, 41, 299, 513
Betty warm period, 30
Biostratigraphic datum levels, Israel, 1197
Biostratigraphy, Hole 380, 146
  method of, Leg 42B, 12
  Site 379, 37
  Site 381, 298
Biostratigraphy summary, Black Sea, 17
Bioturbate textures, 504
Bioturbation, 383
Bituminological studies, Site 379, results of, 690
Bitumoids, 726
  absorption chromatography, 683
  Black Sea, 683
  carbonate content, 683
  column chromatography, 724
  diagenesis, 727
  gas chromatography, 727
  gas-liquid chromatography, 683
  IR-spectrometry, 683
  physical properties, Site 379, 683
  Site 379, composition of, 684
  UV-spectrometry, 683
Bitumosity, degree of in samples from Hole 379A and Site 381, 727
Black Sea,
  bathymetry, 360, 1043
  benthic foraminifers from sediments of western shelf, 783

biostratigraphy summary, 17
bitumoids, 683
black shale sedimentation, 510
bottom sediments of, 627
Bouguer gravity anomaly in, 1044
carbonate varves in, 135
chemical sedimentation, 510
diatom varves from, 137
diatoms, 1160
distribution of Recent sediments, 1079
foraminifers, 1158
forestation of area around, 956
geologic history, 520
geological setting, 1043
geophysical and geological setting of, 1141
geophysical surveys, 1154
gravity studies, 1044
halocline, 730
heat flow, 1046, 1099
heavy minerals, 1172
history of, 1147
Holocene varve chronology, 499
hydrocarbon potential, 1177
hydrography, 360
inorganic geochemical studies, 1169
lacustrine environment, 373
lacustrine phase, 3, 1043
lacustrine sedimentation, 509
late Cenozoic, paleogeography of, 903, 912
late Cenozoic history of, 1141
lithostratigraphy, 413, 495, 1141
magnetics, 1046
major prograding systems, 1079
major rivers draining into the, 499
marine transgression, 955, 1001
molluscs, 1159
nannofossils, 1158
Neoeuxinian epoch, 632
objectives for drilling, 3, 1149
origin, 1046, 1098, 1100, 1155
origin and geological history of, 1085
ostracodes, 1158
paleontology, 1158
paleosalinity, 730, 844,1148
paleotemperature, 851
palynomorph distribution, 997
periodic chemical sedimentation, 513
petroleum-generation potential of late Cenozoic sediments from, 729
physiographic provinces of, 1043
Playa Lake stage of, 643
Pleistocene isolation of, 637
pollen and spores, 1159
*p*H of surface waters, 843
regime of, 3
salinity, 614, 627
salinity changes of water, 536
sediment accumulation rates, 123, 499, 514, 1043, 1069, 1082, 1097, 1158, 1168
sediment thickness, 1149
sedimentary environment, 373
sedimentary framework, 359
sedimentation rates, 1097
seismic activity, 1046
seismic reflection profiles, 1044, 1141
stratigraphic classification schemes, 17
stratigraphy, 17, 361, 1167
stratigraphy problems, 1151
structural setting, 1077
sulfur, 1172
tectonic setting of, 1141
terrigenous sedimentation, 513
thermocline, 134
varves, 499, 1158
Black Sea area, regional geology, 359
Black Sea Basin, 1065
subsidence of, 1147
Black Sea cores, chronostratigraphical correlation, 515
Black Sea drainage area, 359
Black Sea during the Pleistocene glacial fluctuations, history of, 638
Black Sea during Quaternary, paleoclimate, 519
Black Sea glacial stages, based on preliminary paleomagnetic results, 519
Black Sea history as determined by diatoms, 856
Black Sea region, evolution of vegetation, 957
Black Sea, salinization of, 628
Black Sea sedimentation, lagoonal model, 510, 514
Role of Bosporus sill, 514
Black Sea sediments, 360, 707, 765, 1155
alkaline metals content, 597
bacterial densities in, 769
boron content, 598
carbon dioxide, 661
cobalt content, 589
compared to Green River oil shale, 763
copper content, 590
electrical resistivity measurements, 1125
geochemistry of carbonates, 563
hafnium content, 597
hydrocarbon gases, 661
hydrolysate elements content, 593
interstitial water, 1174
lithofacies, 383
lithofauna, 373
manganese content, 588
mineralogy, 360, 373
molybdenum content, 590
nickel content, 589
nickel porphyrins, 707
paleosalinity, 641
phosphorus content, 597
radiocarbon ages, 483
sediment color, 382
sediment structures, 382
selenium content, 591
tantalum content, 597
thorium content, 594
tin content, 594
tungsten content, 591
Black Sea surface water, depletion in oxygen-18 relative to SMOW, 617

Black shales, 828
Black Sea, 510
Paratethys, 522
Blue-green algae, 766
Boron content, Black Sea sediments, 598
Bosporus Strait, 120, 638, 1043, 1065, 1094, 1149
sill depth of, 30, 373
role of in Black Sea sedimentation, 514
Bosporus area, foraminifers from sediments near, 783
Bosporus mineralogical province, 418
Bosporus petrographic province, 422
Bosporus province, 361
Bouguer gravity anomaly in Black Sea, 1044
Bromide in interstitial water
Site 381, 635
Site 380, 633
Bromine, Hole 379A in interstitial water, 632
